Nikko 10-50x60 sidewheel stripdown

With thanks to Jon and Chris to guide me through this process. Once you know what to do, it's not too difficult.

- remove the big sidewheel.

- remove the Nikko logo (it's glued!).

- remove the gold coloured screw. Unscrewing it will put some pressure on the cover above it; the cover is glued as well but will come loose.

- remove the cap with the 2 off-center holes. You need a tool to do this. I made a very simple tool using a piece of wood and 2 small nails. To unscrew, turn clockwise !!

- inside is the first o-ring; it may still be on the cap you just removed.

- pull off the small sidewheel. This will reveal the second o-ring.

- reassemble in reverse order.
