Weihrauch HW80	15.68mm/ 15.75mm / 16mm	N	N
Weihrauch HW100	15.9mm / 16mm	Y	Y
All of our adapters are made to suit to most popular makes and models on the most popular barrel diameters that we have come across.			
Due to manufacturers tolerances you will find on the list that some of the same makes and models have two or more barrel sizes. It is up to the customer to determine the correct size of adaptor required. Some guns have models with removable foresights and some without. In this event. it is the customers responsibility to remove the foresight and check the adaptor for correct fit. We can modify the adapter in the event that the foresight is not removable but an additional charge will be made for this modification. Please note that an accurate drawing will need to be provided by the customer detailing all of the relevant dimensions.			
Please also note that our adapters will fit all Weirauch HW's that have removable foresights as long as the grooves on the end of the barrel are machine cut. On later and newer models of HW's it has come to our attention that the foresight grooves are pressed in which alters the profile of the barrel to oval. The customer would have to do one of the following operations to allow our adapters to fit: 1. Customer to file the barrel grooves down to return the barrel to a circular profile on the end. 2. Have a gun smith shorten the barrel back past the grooves and re face the end in a lathe and re crown. If this operation were undertaken. it would be more cost effective to have the barrel screw cut at the same time.
